

# 2200 Gallon Hydroseeder

**Client: Enviro Culture Services, Albury, Australia**

In Australia, environmental legislation concerning erosion and sediment control means contractors need to monitor and manage operations in line with government policies.

Enviro Culture Services specialises in broad acre landscaping and maintenance, going from constructing landscape from bare ground to maintaining established landscape.

The company commissioned a hydroseeder tanker to be used on motorway verges and in housing estates. The 2200-gallon tanker has a Garda pump and a raingun with vertical and horizontal applications. It also features a full-length auger at the centre of the tank to agitate the materials used in hydroseeding.

## Design Details

- ✓ A Major 2200 industrial specification tanker
- ✓ Garda pump and a raingun with vertical and horizontal applications
- ✓ A full-length auger through the centre of the tank to agitate the hydroseeding product
- ✓ Safety cage and full length platform to safely access the man hole at the top of the tanker
- ✓ A 1.5m sliding gate for pallet access and a ladder with a spring return gate for safe access.

*The design team at Major were fantastic to work with and really open to our ideas. Their professionalism really showed – they had ideas that I hadn't thought of that made me think more laterally. And they were excellent at keeping me updated throughout the whole process. I originally wanted a tanker that could spray grass three or four months of the year. Now, I have a machine that can do two or three other applications that we hadn't considered doing.*

*There's so many opportunities for the tanker, anywhere from mining to commercial landscaping to environmental companies. You can see it's a well-built machine so it's going to last. With unlimited uses for soil stabilisation and dust suppression, this unit is going to pay for itself.*

**Shannon Edwards, Managing Director, Enviro Culture Services, Australia**
