## To the Owner/Operator/Dealer

All implements with moving parts are potentially hazardous. There is no substitute for a cautious, safe-minded operator who recognizes the potential hazards and follows reasonable safety practices. The manufacturer has designed this implement to be used with all its safety equipment properly attached to minimize the chance of accidents.

BEFORE YOU START! Read the safety messages on the implement and shown in your manual. Observe the rules of safety and common sense!

#### WARRANTY INFORMATION:

Read and understand the complete Warranty Statement found in this Manual. Fill out the Warranty Registration Form in full and return it to within 30 Days. Make certain the Serial Number of the Machine is recorded on the Warranty Card and on the Warranty Form that you retain.

# **SAFETY SECTION**

Safety Section 1-1

#### Safety Messages

A careful operator is the best operator. Safety is of primary importance to the manufacturer and should be to the owner/operator. Most accidents can be avoided by being aware of your equipment, your surroundings, and observing certain precautions. The first section of this manual includes a list of Safety Messages that, if followed, will help protect the operator and bystanders from injury or death. Read and understand these Safety Messages before assembling, operating or servicing this Implement. This equipment should only be operated by those persons who have read the manual, who are responsible and trained, and who know how to do so responsibly.

The Safety Alert Symbol combined with a Signal Word, as seen below, is used throughout this manual and on decals which are attached to the equipment. The Safety Alert Symbol means: "ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!" The Symbol and Signal Word are intended to warn the owner/operator of impending hazards and the degree of possible injury faced when operating this equipment.

Practice all usual and customary safe working precautions and above all---remember safety is up to <u>YOU</u>. Only <u>YOU</u> can prevent serious injury or death from unsafe practices.

Indicates an imminently hazardous situation that, if not avoided, WILL result in DEATH OR VERY SERIOUS INJURY.

**A**WARNING

Important

**ING** Indicates an imminently hazardous situation that, if not avoided, COULD result in DEATH OR SERIOUS INJURY.

**A** CAUTION Indicates an imminently hazardous situation that, if not avoided, MAY result in MINOR INJURY.

Identifies special instructions or procedures that, if not strictly observed, could result in damage to, or destruction of the machine, attachments or the environment.

NOTE: Identifies points of particular interest for more efficient and convenient operation or repair.(SG-1)

<u>READ, UNDERSTAND, and FOLLOW</u> the following Safety Messages. Serious injury or death may occur unless care is taken to follow the warnings and instructions stated in the Safety Messages. Always use good common sense to avoid hazards. (SG-2)

A PELIGRO

Si no lee ingles, pida ayuda a alguien que si lo lea para que le traduzca las medidas de seguridad. (SG-3)

Safety Section 1-2

ADANGER Never operate the Tractor or Implement until you have read and completely understand this Manual, the Tractor Operator's Manual, and each of the Safety Messages found in the Manual or on the Tractor and Implement. Learn how to stop the tractor engine suddenly in an emergency. Never allow inexperienced or untrained personnel to operate the Tractor or Implement without supervision. Make sure the operator has fully read and understood the manuals prior to operation. (SG-4)

Always maintain the safety signs in good readable condition. If the safety signs are missing, damaged, or unreadable, obtain and install replacement safety signs immediately. (SG-5)

Make certain that the "Slow Moving Vehicle" (SMV) sign is installed in such a way as to be clearly visible and legible. When transporting the Equipment use the Tractor flashing warning lights and follow all local traffic regulations. (SG-6)

Operate this Equipment only with a Tractor equipped with an approved rollover-protective system (ROPS). Always wear seat belts. Serious injury or even death could result from falling off the tractor--particularly during a turnover when the operator could be pinned under the ROPS. (SG-7)

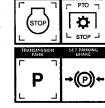

**AWARNING** Do not modify or alter this Implement. Do not permit anyone to modify or alter this Implement, any of its components or any Implement function. (SG-8)

**ADANGER** BEFORE leaving the tractor seat lower the implement, set the parking brake and/or set the tractor transmission in parking gear, disengage the PTO, stop the engine, remove the key, and wait for all moving parts to stop. Place the tractor shift lever into a low range or parking gear to prevent the tractor from rolling. Never dismount a Tractor that is moving or while the engine is running. Operate the Tractor controls from the tractor seat only. (SG-9)

Never allow children or other persons to ride on the Tractor or Implement. Falling off can result in serious injury or death. (SG-10)

3500 02/12

A DANGER

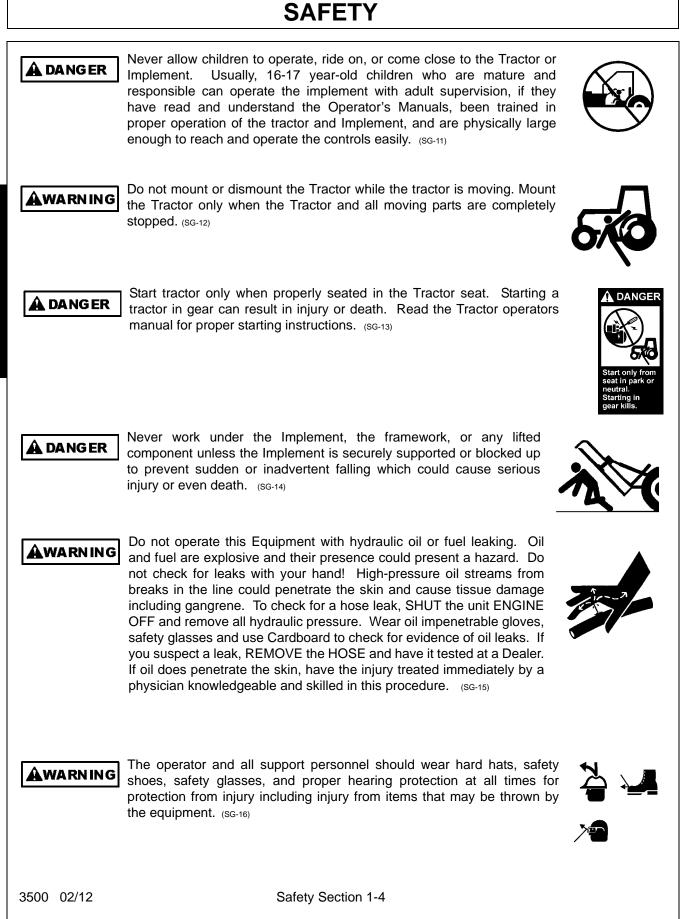

SAFETY

▲ CAUTION PROLONGED EXPOSURE TO LOUD NOISE MAY CAUSE PERMANENT HEARING LOSS! Tractors with or without an Implement attached can often be noisy enough to cause permanent hearing loss. We recommend that you always wear hearing protection if the noise in the Operator's position exceeds 80db. Noise over 85db over an extended period of time will cause severe hearing loss. Noise over 90db adjacent to the Operator over an extended period of time will cause permanent or total hearing loss. NOTE: Hearing loss from loud noise [from tractors, chain saws, radios, and other such sources close to the ear] is cumulative over a lifetime without hope of natural recovery. (sg-17)

**AWARNING** Transport only at speeds where you can maintain control of the equipment. Serious accidents and injuries can result from operating this equipment at high speeds. Understand the Tractor and Implement and

how it handles before transporting on streets and highways. Make sure the Tractor steering and brakes are in good condition and operate properly.

Before transporting the Tractor and Implement, determine the proper transport speeds for you and the equipment. Make sure you abide by the following rules:

Test the tractor at a slow speed and increase the speed slowly. Apply the Brakes smoothly to determine the stopping characteristics of the Tractor and Implement. As you increase the speed of the Tractor the stopping distance increases. Determine the maximum transport speed not to exceed 20 mph (30 kph) for transporting this equipment.

Test the equipment at a slow speed in turns. Increase the speed through the turn only after you determine that the equipment can be operated at a higher speed. Use extreme care and reduce your speed when turning sharply to prevent the tractor and implement from turning over. Determine the maximum turning speed for you and this equipment before operating on roads or uneven ground.

Only transport the Tractor and Implement at the speeds which allow you to properly control the equipment.

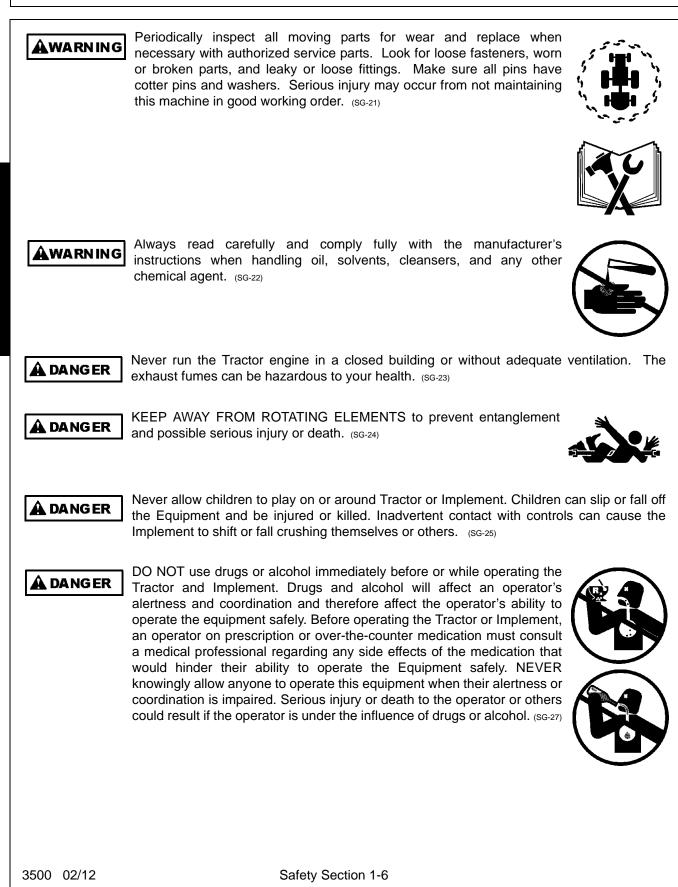

Be aware of the operating conditions. Do not operate the Tractor with weak or faulty brakes or worn tires. When operating down a hill or on wet or rain slick roads, the braking distance increases: use extreme care and reduce your speed. When operating in traffic always use the Tractor's flashing warning lights and reduce your speed. Be aware of traffic around you and watch out for the other guy. (SG-19)

Never attempt to lubricate, adjust, or remove material from the Implement while it is in motion or while tractor engine is running. (SG-20)

🗚 WARN IN G

Safety Section 1-5

SAFETY

	SAFETY
A DANGER	Operate the Tractor and/or Implement controls only while properly seated in the Tractor seat with the seat belt securely fastened around you. Inadvertent movement of the Tractor or Implement may cause serious injury or death. (SG-29)
<b>AWARNING</b>	Be particularly careful when transporting the Implement with the Tractor. Turn curves or go up hills only at a low speed and using a gradual steering angle. Rear mounted implements move the center of gravity to the rear and remove weight from the front wheels. Make certain, by adding front ballast, that at least 20% of the tractor's weight is on the front wheels to prevent rearing up, loss of steering control or Tractor tip-over. Slow down on rough or uneven surfaces to prevent loss of steering control which could result in property damage or possible injury. Do not transport unless 3-Point lift lever is fully raised and in the latched transport position. Dropping implement in transport can cause serious damage to the tractor and/or Implement and possibly cause the operator or others to be injured or killed. (S3PT-02)
<b>A</b> WARN IN G	Relieve hydraulic pressure prior to doing any maintenance or repair work on the Implement. Place the Implement on the ground or securely blocked up, disengage the PTO, and turn off the tractor engine. Push and pull the Remote Cylinder lever in and out several times prior to starting any maintenance or repair work. (S3PT-09)
<b>A</b> DANGER	This Implement may be wider than the Tractor. Be careful when operating or transporting this equipment to prevent the Implement from running into or striking sign posts, guard rails, concrete abutments or other solid objects. Such an impact could cause the Implement and Tractor to pivot violently resulting in loss of steering control, serious injury, or even death. Never allow the Implement to contact obstacles. (S3PT-12)
A DANGER	There are obvious and hidden potential hazards in operating Rear Blades and Box Scrapers as in all power-driven equipment. REMEMBER! This machine is often operated in rough terrain conditions that include gullies, holes, slopes, hidden obstructions and the like. Serious injury or even death may occur unless care is taken to assure the personal safety of the operator and bystanders in the area. (SBL-1)
A DANGER	NEVER PARK BLADE ON THE BACK OF THE MOLDBOARD. Inadvertent falling could cause serious injury or even death. ALWAYS LOWER HITCH onto stand or onto secure blocks. (SBL-2)
A DANGER	Never leave blade unattended in the lifted position. Accidental operation of lifting lever or a hydraulic failure may cause sudden drop of unit with subsequent injury or death by crushing. Lower Stand and pin in place, or put a secure support under the A-Frame. Lower Blade carefully to the ground. Do not put hands or feet under lifted components. (SBL-4)
3500 02/12	Safety Section 1-7

I

### **AWARNING**

Rear Blades can fall down if not properly supported. Always use the stand on the front hitch or block up securely to prevent falling and possible crushing injury and/or back injury from lifting heavy components. (SBL-5)

#### PARTS INFORMATION

Rhino products are designed utilizing specifically matched system components to ensure optimum equipment performance. These parts are made and tested to Rhino specifications. Non-genuine "will fit" parts do not consistently meet these specifications. The use of "will fit" parts may reduce equipment performance, void warranties, and present a safety hazard. Use genuine Rhino parts for economy and safety. (SPRM-2)

#### SEE YOUR RHINO DEALER

In addition to the design and configuration of this Implement, including Safety Signs and Safety Equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence, and proper training of personnel involved in the operation, transport, maintenance, and storage of the machine. Refer also to Safety Messages and operation instruction in each of the appropriate sections of the Tractor and Equipment Manuals. Pay close attention to the Safety Signs affixed to the Tractor and Equipment. (SG-18)

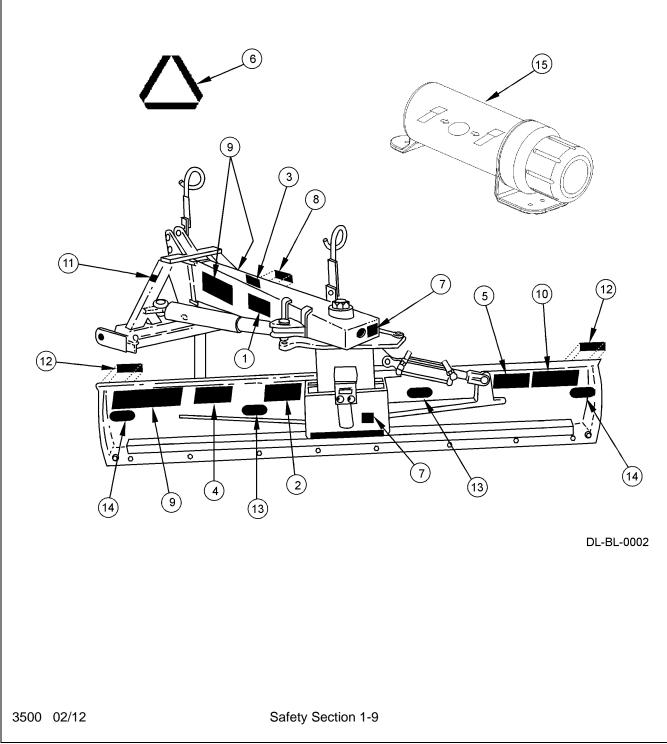

3500 02/12

Safety Section 1-8

SAFETY

### **Decal Location**

**NOTE:** Rhino supplies safety decals on this product to promote safe operation. Damage to the decals may occur while in shipping, use, or reconditioning. Rhino cares about the safety of its customers, operators, and bystanders, and will replace the safety decals on this product in the field, free of charge (Some shipping and handling charges may apply). Contact your Rhino dealer to order replacement decals.

SAFETY

#### **Federal Laws and Regulations**

This section is intended to explain in broad terms the concept and effect of federal laws and regulations concerning employer and employee equipment operators. This section is not intended as a legal interpretation of the law and should not be considered as such.

#### **Employer-Employee Operator Regulations**

U.S. Public Law 91-596 (The Williams-Steiger Occupational and Health Act of 1970) OSHA

#### This Act Seeks:

"...to assure so far as possible every working man and woman in the nation safe and healthful working conditions and to preserve our human resources..."

#### DUTIES

Sec. 5 (a) Each employer-

(1) shall furnish to each of his employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees;

(2) shall comply with occupational safety and health standards promulgated under this Act.

(b) Each employee shall comply with occupational safety and health standards and all rules, regulations and orders issued pursuant to this Act which are applicable to his own actions and conduct.

#### **OSHA** Training Requirements

#### Title 29, Code of Federal Regulations Part 1928.57(a)(6). www.osha.gov

Operator instructions. At the time of initial assignment and at least annually thereafter, the employer shall instruct every employee who operates an agricultural tractor and implements in the safe operating practices and servicing of equipment with which they are or will be involved, and of any other practices dictated by the work environment.

Keep all guards in place when the machine is in operation;

Permit no riders on equipment

Stop engine, disconnect the power source, and wait for all machine movement to stop before servicing, adjusting, cleaning or unclogging the equipment, except where the machine must be running to be properly serviced or maintained, in which case the employer shall instruct employees as to all steps and procedures which are necessary to safely service or maintain the equipment.

Make sure everyone is clear of machinery before starting the engine, engaging power, or operating the machine.

#### **Employer Responsibilities:**

To ensure employee safety during Tractor and Implement operation, it is the employer's responsibility to:

- 1. Train the employee in the proper and safe operation of the Tractor and Implement.
- 2. Require that the employee read and fully understand the Tractor and Implement Operator's manual.
- 3. Permit only qualified and properly trained employees to operate the Tractor and Implement.
- 4. Maintain the Tractor and Implement in a safe operational condition and maintain all shields and guards on the equipment.
- 5. Ensure the Tractor is equipped with a functional ROPS and seat belt and require that the employee operator securely fasten the safety belt and operate with the ROPS in the raised position at all times.
- 6. Forbid the employee operator to carry additional riders on the Tractor or Implement.
- 7. Provide the required tools to maintain the Tractor and Implement in a good safe working condition and provide the necessary support devices to secure the equipment safely while performing repairs and service.
- 8. Require that the employee operator stop operation if bystanders or passersby come within 300 feet.

#### Child Labor Under 16 Years of Age

Some regulations specify that no one under the age of 16 may operate power machinery. It is your responsibility to know what these regulations are in your own area or situation. (Refer to U.S. Dept. of Labor, Employment Standard Administration, Wage & Home Division, Child Labor Bulletin #102.)

# **INTRODUCTION SECTION**

Introduction Section 2-1

# INTRODUCTION

This 3500 is designed with care and built with quality materials by skilled workers. Proper assembly, maintenance, and operating practices, as described in this manual, will help the owner/operator get years of satisfactory service from the machine.

The purpose of this manual is to familiarize and instruct. The Assembly Section instructs the owner/operator in the correct assembly of the Blade using standard and optional equipment. The Parts Listing section is designed to familiarize the owner/operator with replaceable parts on the Blade. This section provides exploded assembly drawings of each Blade component illustrating each piece and the corresponding part number.

Careful use and timely service saves extensive repairs and costly downtime losses. The Operation and Maintenance Sections of the manual train the owner/operator how to work the Blade correctly and attend to appropriate maintenance. The Trouble Shooting Guide helps diagnose difficulties and offers solution to the problems.

Safety is of primary importance to the owner/operator and to the manufacturer. The first section of this manual includes a list of Safety Messages, that, if followed, will help protect the operator and bystanders from injury or death. Many of the Safety Messages will be repeated throughout the manual. The owner/operator/dealer should know these Safety Messages before assembly and be aware of the hazards of operating this blade during assembly, use, and maintenance. The Safety Alert Symbol combined with a Signal Word, as seen below, is intended to warn the owner/operator of impending hazards and the degree of possible injury faced when operating this machine.

A DANGER

Indicates an imminently hazardous situation that, if not avoided, WILL result in DEATH OR VERY SERIOUS INJURY.

**AWARNING** Indicates an imminently hazardous situation that, if not avoided, COULD result in DEATH OR SERIOUS INJURY.

**A**CAUTION

Indicates an imminently hazardous situation that, if not avoided, MAY result in MINOR INJURY.

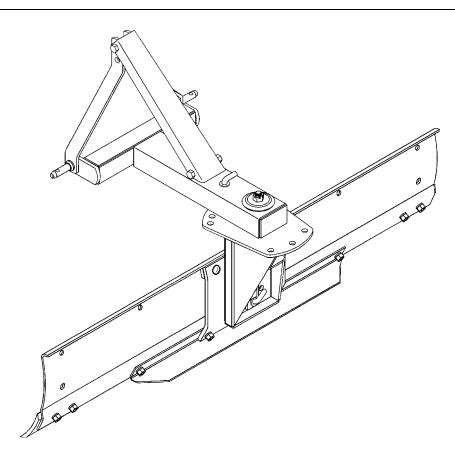

Important

Identifies special instructions or procedures that, if not strictly observed, could result in damage to, or destruction of the machine, attachments or the environment.

3500 02/12

Introduction Section 2-2

## INTRODUCTION

The 3500 Blade is available in widths of 12' and 14' and features a massive CAT III-IV three-point hitch and quick-hitch. The 14' model is rated for up to 250 draw bar horsepower wheel-type tractors. Hydraulic adjustment of the mainframe swing, moldboard angle, and moldboard tilt is standard for easy and fast adjustments. The 3500 features a maximum of 50" of offset to easily reach outside the dual wheels of large tractors. The 5" diameter solid steel kingpin, boxed-section, reinforced 1/2" x 20" moldboard, and heavy-duty hitch and mainframe provide the dependability Rhino blades are known for. Skid shoes, quick-tach end plates, and dual gauge wheels are optional equipment adding to the versatility of the 3500 blade.

**A**WARN IN G

At least 20% or the tractor's weight must be on the front tires with the implement lifted to provide adequate traction for safe steering under good conditions. Slow down on hills, rough terrain, and curves.

Front and rear, and left and right are determined by the normal direction of travel (the same as on your automobile).

3500 02/12

Introduction Section 2-3

INTRODUCTION

# INTRODUCTION

### **Attention Owner/Operator**

BEFORE OPERATING THIS MACHINE:

1. Carefully read the Operator's Manual, completely understand the Safety Messages and instructions, and know how to operate correctly both the tractor and implement.

2. Fill out the Warranty Card in full. Be sure to answer all questions, including the Serial Number of the implement. Mail within 30 days of delivery date of this implement.

**NOTE:** Warranties are honored only if completed "Owner Registration and Warranty" forms are received by Alamo Group within thirty days of delivery of the implement.

3. Record the Blade Model and Serial Numbers on the Warranty page at the front of the Operator's Manual. Keep this as part of the permanent maintenance file for the implement.

For your safety and to guarantee optimum product reliability, always use Genuine RHINO replacement parts. The use of inferior "will-fit" parts will void Warranty of your RHINO implement and may cause premature or catastrophic failure which can result in serious injury or death. If you have any questions concerning the repair parts you are using, contact Rhino, 1020 S. Sangamon Ave., Gibson City, Illinois 60936 A Member of Alamo Group

3500 02/12

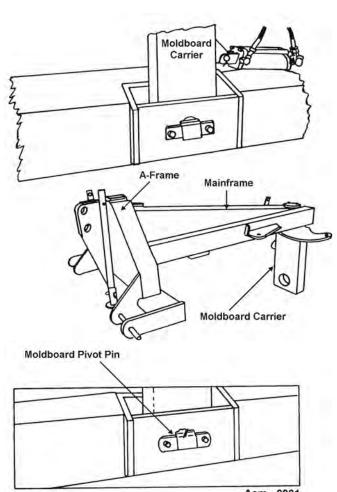

Introduction Section 2-4

# **ASSEMBLY SECTION**

Assembly Section 3-1

### Assembly of Moldboard to Mainframe

The Rhino 3500 Blade is shipped in two bundles. The Mainframe, A-Frame and Moldboard Carrier are in one bundle; the Moldboard is in the second bundle. The assembly of the Moldboard to the Moldboard Carrier is made by inserting the Moldboard Pivot Pin and securing with Bolts.

Asm - 0001

**A**CAUTION

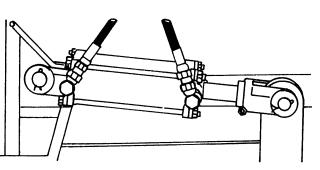

Until Hydraulic Cylinders are connected and under pressure, block Moldboard to Moldboard Carrier to prevent possible tilting and falling from stand.

3500 02/12

Assembly Section 3-2

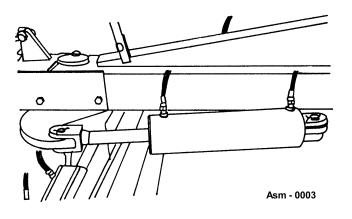

# ASSEMBLY

Attach Moldboard Tilt Cylinder with the Rod End attached to the Moldboard.

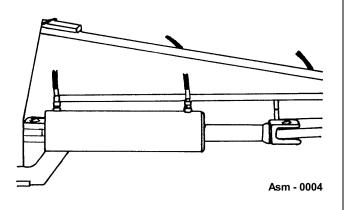

Asm - 0002

Attach the Moldboard Pivot Cylinder.

Attach the Mainframe Swing Cylinder.

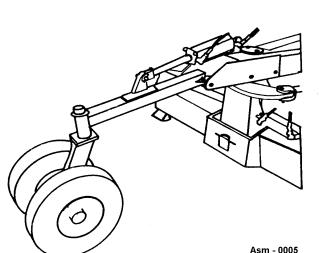

3500 02/12

Assembly Section 3-3

# **ASSEMBLY**

### **Gauge Wheel (Extra Equipment)**

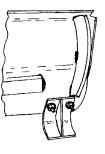

Mounting Holes have been provided for mounting the Gauge Wheel to the Mainframe. Dual Wheels with laminated puncture proof tires are optional. Assembly of the Hydraulic Cylinder to the Gauge Wheel Beam must be in the direction as shown in Figure Am-0005. It is also important to route the hydraulic Hose through the Hose Retainers designed for this equipment.

## Skid Shoes & Quick Tack End Plates (Extra Equipment)

Skid Shoes prevent gouging and scalping and increase Blade life. End Plates help move larger quantities of bulk material. Install as shown in Figure Am-0006. Neither can be used while ditching.

Asm - 0006

ASSEMBLY

3500 02/12

Assembly Section 3-4

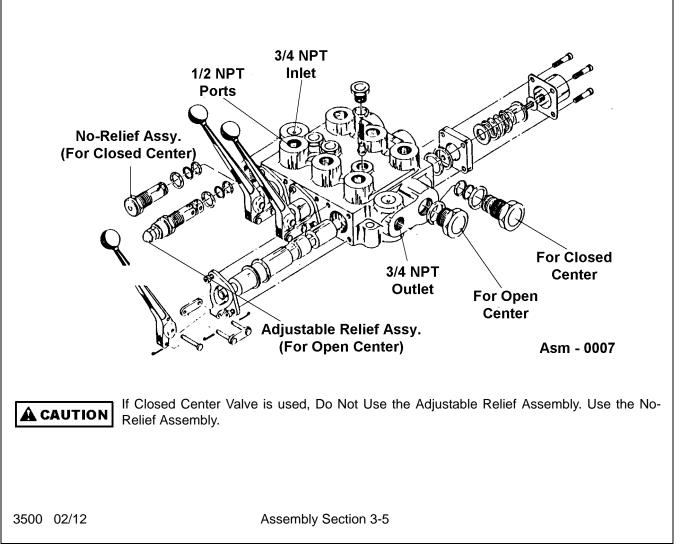

## Hydraulic System

The Hydraulic Cylinders are designed to be used in conjunction with your tractor's Hydraulic System. The Cylinders and Hose are designed for maximum system pressure of 2500 PSI.

Keep Cylinders and Hoses free from internal contamination. Never leave a disconnected Hose end open. Use a Sealant when attaching Hydraulic Hose to Cylinder. Do not over tighten fittings as this will break out the Cylinder Port Housings. Do not operate with hydraulic oil leaking. Oil is expensive and its presence could cause slips and falls and other hazards. DO NOT CHECK FOR LEAKS WITH YOUR HAND. USE CARDBOARD INSTEAD. High-pressure oil can penetrate the skin and cause tissue damage or even GANGRENE. If oil does penetrate the skin, have it REMOVED IMMEDIATELY by a surgeon skilled in this procedure.

## Hydraulic Control Valve (Accessory Equipment)

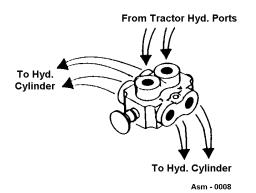

A three-spool, four way Hydraulic Control Valve, Open Center or Closed Center, is available as Accessory Equipment. This allows you to operate four Hydraulic Cylinders from two remote outlets. Connect the three-spool Valve to one outlet to operate three Cylinders. Use the other remote outlet to operate the fourth Cylinder.

ASSEMBLY

### **Selector Valve (Accessory Equipment)**

The Mainframe Swing, Moldboard Pivot and Tilt are fully hydraulic. All three Cylinders can be operated from two remote outlets. Below is a schematic diagram showing proper routing of two Cylinders through the Selector Valve. When installing this Valve, observe all safety precautions as Hydraulic Lines are under high pressure (2500 PSI). If additional information is required concerning your Hydraulic System, contact your Rhino Dealer.

3500 02/12

Assembly Section 3-6

# **OPERATION SECTION**

**Operation Section 4-1** 

## **OPERATION**

## RHINO 3500 REAR MOUNTED BLADE OPERATION INSTRUCTIONS

Your Rhino 3500 should now be assembled and inspected for any evidence of defective or damaged parts before use. Any evidence of damage should be reported to your dealer immediately. After Hydraulic Lines have been attached to tractor and Three-Point Hitch attached, carefully remove safety blocks from Moldboard pivot Point.

This section of the Operator's Manual is designed to familiarize, instruct, and educate safe and proper blade use to the operator. Pictures contained in this section are intended to be used as a visual aid to assist in explaining the operation of a rear blade and are not necessarily of a 3500 blade. Some pictures may show shields removed for purposes of clarity. NEVER OPERATE this implement without all shields in place and in good operational condition. The operator must be familiar with the blade and tractor operation and all associated safety practices before operating the blade and tractor. Proper operation of the blade, as detailed in this manual, will help ensure years of safe and satisfactory use of the rear blade.

**READ AND UNDERSTAND THE ENTIRE OPERATING INSTRUCTIONS AND SAFETY SECTION OF THIS MANUAL AND THE TRACTOR MANUAL BEFORE ATTEMPTING TO USE THE TRACTOR AND IMPLEMENT.** If you do not understand any of the instructions, contact your nearest authorized dealer for a full explanation. Pay close attention to all safety signs and safety messages contained in this manual and those affixed to the implement and tractor. *OPS-U- 0001* 

<u>READ, UNDERSTAND, and FOLLOW</u> the following Safety Messages. Serious injury or death may occur unless care is taken to follow the warnings and instructions stated in the Safety Messages. Always use good common sense to avoid hazards. (SG-2)

3500 02/12

**Operation Section 4-2** 

## **1. Standard Equipment and Specifications**

Max. Front Wheel Assist Tractor:

HP (PTO) 12'	300 HP
HP (PTO) 14'	250 HP
Moldboard Width	12' or 14'
Moldboard Dimension	1/2" x 20"
Cutting Edge	1/2" x 6"
Support Stand	Std.
Hitch	CAT III-IV and QH
King Pin Diameter	5"
Adjustment Types	Hydraulic
Offset (Maximum Left or Right)	50"
Forward Angle	Infinite-45 Degrees
Reverse Angle	Infinite-45 Degrees
Tilt (Up and Down)	Infinite-15 Degrees
No. of No-Wrench Adjustments	N/A
Weight (Approx.):	
12'	3463 lbs.
14'	3603 lbs.

3500 02/12

**Operation Section 4-3** 

# **OPERATION**

## 2. OPERATOR REQUIREMENTS

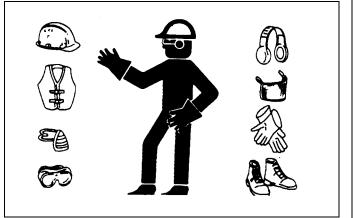

Safe operation of the unit is the responsibility of a qualified operator. A qualified operator has read and understands the implement and tractor Operator's Manuals and is experienced in implement and tractor operation and all associated safety practices. In addition to the safety messages contained in this manual, safety signs are affixed to the implement and tractor. If any part of the operation and safe use of this equipment is not completely understood, consult an authorized dealer for a complete explanation.

If the operator cannot read the manuals for themselves or does not completely understand the operation of the equipment, it is the responsibility of the supervisor to read and explain the manuals, safety practices, and operating instructions to the operator.

Safe operation of equipment requires that the operator wear approved Personal Protective Equipment (PPE) for the job conditions when attaching, operating, servicing, and repairing the equipment. PPE is designed to provide operator protection and includes the following safety wear:

#### PERSONAL PROTECTIVE EQUIPMENT (PPE)

- Always Wear Safety Glasses
- Hard Hat
- Steel Toe Safety Footwear
- Gloves
- Hearing Protection
- Close Fitting Clothing
- Respirator or Filter Mask (depends on operating conditions) OPS-U- 0002

#### A DANGER

DO NOT use drugs or alcohol immediately before or while operating the Tractor and Implement. Drugs and alcohol will affect an operator's alertness and coordination and therefore affect the operator's ability to operate the equipment safely. Before operating the Tractor or Implement, an operator on prescription or over-the-counter medication must consult a medical professional regarding any side effects of the medication that would hinder their ability to operate the Equipment safely. NEVER knowingly allow anyone to operate this equipment when their alertness or coordination is impaired. Serious injury or death to the operator or others could result if the operator is under the influence of drugs or alcohol. (SG-27)

3500 02/12

**Operation Section 4-4** 

**OPERATION** 

## **3. TRACTOR REQUIREMENTS**

Operating the blade with a tractor that does not meet the following requirements may cause tractor or blade damage and be a potential danger to the operator and passersby.

#### **Tractor Requirements and Capabilities**

- ASABE approved Roll-Over Protective Structure (ROPS) or ROPS cab and seat belt.
- Tractor Safety Devices ......Slow Moving Vehicle (SMV) emblem, lighting, PTO master shield
- Tractor Horsepower:

.

- Front Wheel ...... 12' 300 HP, 14' 250 HP
- Hitch 3 Point Hitch..... CAT III-IV and QH
  - Lifting Capacity ......12' 3463 lbs., 14' 3603 lbs.
- Front End Weights...... As needed to maintain 20% weight on front axle

#### 3.1 ROPS and Seat Belt

The tractor must be equipped with a Roll-Over-Protective-Structure (ROPS) (tractor cab or roll-bar) and seat belt to protect the operator from falling off the tractor, especially during a roll over where the driver could be crushed and killed. Only operate the tractor with the ROPS in the raised position and seat belt fastened. Tractor models not equipped with a ROPS and seat belt should have these life saving features installed by an authorized dealer. *OPS-U- 0003* 

Operate this Equipment only with a Tractor equipped with an approved rollover-protective system (ROPS). Always wear seat belts. Serious injury or even death could result from falling off the tractor--particularly during a turnover when the operator could be pinned under the ROPS. (SG-7)

#### 3.2 Tractor Horsepower

The power required to operate a blade is determined by the tractor PTO horsepower. For most operating conditions, the 3500 rear blade requires a tractor with at least 300 HP for 12' and 250 HP for 14.' Operating the blade with a tractor that does not have adequate power may damage the tractor engine. Exceeding the recommended horsepower may cause blade damage by overpowering the unit in heavy operating conditions.

3500 02/12

**Operation Section 4-5** 

# **OPERATION**

#### 3.3 Tractor 3-Point Hitch

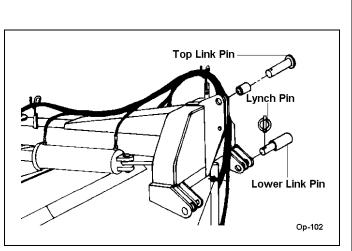

The tractor 3-point hitch must be rated to lift at least 3463 lbs. for the 12' and 3603 lbs. for the 14'.

The 3500 can attach to tractor's with either a CAT III or IV hitch. Refer to the tractor operator's manual for the category of the tractor used. If the hitch does not conform to the ASABE CAT III or IV dimensions, the blade may not fit or raise properly. Consult an authorized dealer for possible modification procedures to mount nonconforming hitches.

Use the correct hitch pins for the hitch category being used. For a Cat III hitch, 1-1/8" lower and a 1" upper diameter hitch pins are used and Cat IV hitches require 1-7/16" lower and a 1-1/4" upper diameter hitch pins.

Width from outside to outside A-frame	38"
Quick Hitch width inside lug to lug	.39-1/4"
Height from bottom hitch pin to top pin	22"
Lower pin diameter	.1-7/16"
Upper pin diameter	1-1/4"
Linch pin diameter	15/32"

#### **CAT IV Implement/ Hitch Specification**

Width from outside to outside A-frame4	5-15/16"
Quick Hitch width inside lug to lug	.47-1/4"
Height from bottom hitch pin to top pin	27"
Lower pin diameter	1-3/4"
Upper pin diameter	1-3/4"
Linch pin diameter	11/16"

#### 3.4 Front End Weight

A minimum of 20% total tractor weight must be maintained on the tractor front end at all times. Front end weight is critical to maintain steering control and to prevent the tractor from rearing up while driving. If the front end is too light, add weight until a minimum of 20% total weight is reached on the front tires. Front weights and weight carriers can be purchased through an authorized tractor dealership. *OPS-U-0005* 

## 4. GETTING ON AND OFF THE TRACTOR

Before getting onto the tractor, the operator must read and completely understand the implement and tractor operator manuals. If any part of either manual is not completely understood, consult an authorized dealer for a complete explanation. *OPS-U- 0007* 

**A**WARNING

Do not mount or dismount the Tractor while the tractor is moving. Mount the Tractor only when the Tractor and all moving parts are completely stopped.  $_{\rm (SG-12)}$ 

3500 02/12

**Operation Section 4-6** 

## 4.1 Boarding the Tractor

Use both hands and equipped handrails and steps for support when boarding the tractor. Never use control levers for support when mounting the tractor. Seat yourself in the operator's seat and secure the seat belt around you.

Never allow passengers to ride on the tractor or attached equipment. Riders can easily fall off and be seriously injured or killed from falling off and being ran over. It is the operator's responsibility to forbid all extra riders at all times. *OPS-U- 0008* 

ADANGER Never allow children to operate, ride on, or come close to the Tractor or Implement. Usually, 16-17 year-old children who are mature and responsible can operate the implement with adult supervision, if they have read and understand the Operator's Manuals, been trained in proper operation of the tractor and Implement, and are physically large enough to reach and operate the controls easily. (SG-11)

Never allow children or other persons to ride on the Tractor or Implement. Falling off can result in serious injury or death. (SG-10)

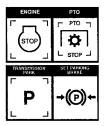

## 4.2 Dismounting the Tractor

Before dismounting, park the tractor and implement on a reasonably level surface, apply the parking brake, idle the engine down, disengage the PTO, and lower the implement to the ground. Shut down the tractor engine according to the operator's manual, remove the key, and wait for all motion to completely stop. Never leave the seat until the tractor, its engine and all moving parts have come to a complete stop.

Use hand rails and steps when exiting the tractor. Be careful of your step and use extra caution when mud, ice, snow or other matter has accumulated on the steps or hand rails. Use all handrails and steps for support and never rush or jump off the tractor. *OPS-U- 0009* 

## A DANG ER

BEFORE leaving the tractor seat lower the implement, set the parking brake and/or set the tractor transmission in parking gear, disengage the PTO, stop the engine, remove the key, and wait for all moving parts to stop. Place the tractor shift lever into a low range or parking gear to prevent the tractor from rolling. Never dismount a Tractor that is moving or while the engine is running. Operate the Tractor controls from the tractor seat only. (SG-9)

3500 02/12

## **5. STARTING THE TRACTOR**

The operator must have a complete understanding of the placement, function, and operational use of all tractor controls before starting the tractor. Review the tractor operator's manual and consult an authorized dealer for tractor operation instructions if needed.

**Essential Tractor Controls:** 

- Locate the ignition switch
- Locate the light control lever
- Locate the engine shut off control
- Locate the engine throttle control
- Locate the brake pedals and the clutch
- Locate the parking brake
- Locate the PTO control

**OPERATION** 

- Locate the 3-point hitch control lever
- Locate the hydraulic remote control levers

Before starting the tractor ensure the following:

- Conduct all pre-start operation inspection and service according to the tractor operator's manual.
- Make sure all guards, shields, and other safety devices are securely in place.
- The parking brake is on.
- The 3-point hitch control lever is in the lowered position.
- The hydraulic remote control levers are in the neutral position.
- The tractor transmission levers are in park or neutral.

Refer to the tractor owner's manual for tractor starting procedures. Only start the tractor while seated and belted in the tractor operator's seat. Never bypass the ignition switch by short circuiting the starter solenoid.

After the tractor engine is running, avoid accidental contact with the tractor transmission to prevent sudden and unexpected tractor movement. *OPS-0010\_B* 

Never run the Tractor engine in a closed building or without adequate ventilation. The exhaust fumes can be hazardous to your health. (SG-23)

Start tractor only when properly seated in the Tractor seat. Starting a tractor in gear can result in injury or death. Read the Tractor operators manual for proper starting instructions. (SG-13)

# **6. CONNECTING THE REAR BLADE TO THE TRACTOR**

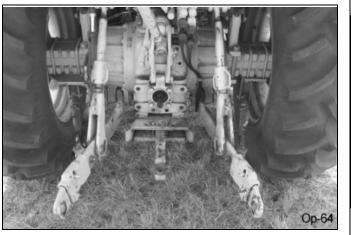

Use extreme caution when connecting the blade to the tractor. The rear blade should be securely resting at ground level or set on blocks. Keep hands and feet from under the blade and clear of pinch points between the tractor hitch arms and blade pins. *OPS-0011\_A* 

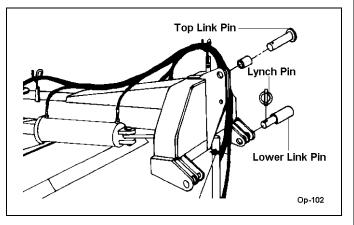

3500 02/12

Always shut the Tractor completely down, place the transmission in park, and set the parking brake before you or anyone else attempts to connect or disconnect the Implement and Tractor hitches. (S3PT-15)

#### 6.1 Connecting the Rear Blade

- 1. Shorten or remove the tractor drawbar to avoid interference when raising and lowering the rear blade.
- 2. Board the tractor and start the engine. Position the tractor to the blade with the 3point lift arms positioned between the respective set of blade A-frame lift lugs. **Note:** Set the 3-point lift control to "Position Control" so that the lift arms maintain a constant height when attaching the blade. See the tractor Operator's Manual for correct settings when attaching 3-point equipment.
- 3. Turn off the tractor engine, set the parking brake, place the tractor in park, and dismount.
- 4. One lift arm at a time, align arm end hole between the set of holes of A-frame lift lugs. Insert hitch pin through the lug and arm holes and insert retaining pin into hitch pin. Walk around to opposite side and repeat procedure for remaining lift arm and hitch pin.
- 5. Extend or retract the 3-point top link to align its end hole with the holes of the blade's top link. Insert the top link pin and retain with the lynch pin.
- Adjust any lower link check chains, guide blocks, or sway blocks to prevent the blade from swaying side to side and possible contact with tractor rear tires.

## 🛦 DANG ER

Never work under the Implement, the framework, or any lifted component unless the Implement is securely supported or blocked up to prevent sudden or inadvertent falling which could cause serious injury or even death. (SG-14)

3500 02/12

**Operation Section 4-9** 

OPERATION

## 7. PRE-OPERATION INSPECTION AND SERVICE

Before each use, a pre-operation inspection and service of the implement and tractor must be performed. This includes routine maintenance and scheduled lubrication, inspecting that all safety devices are equipped and functional, and performing needed repairs. DO NOT operate the unit if the pre-operation inspection reveals any condition affecting safe operation. Perform repairs and replacement of damaged and missing parts as soon as noticed. By performing a thorough pre-operation inspection and service, valuable down time and repair cost can be avoided. *OPS-U-0029* 

## AWARNING

Periodically inspect all moving parts for wear and replace when necessary with authorized service parts. Look for loose fasteners, worn or broken parts, and leaky or loose fittings. Make sure all pins have cotter pins and washers. Serious injury may occur from not maintaining this machine in good working order. (SG-21)

## 7.1 Tractor Pre-Operation Inspection/Service

Refer to the tractor operator's manual to ensure a complete pre-operation inspection and scheduled service is performed according to the manufacturers recommendations. The following are some of the items that require daily service and inspection:

- Tire condition/air pressure
- Wheel lug bolts
- Steering linkage
- PTO shield
- SMV sign is clean and visible
- Tractor's lights are clean and functional
- Tractor Seat belt is in good condition
- Tractor ROPS is in good condition
- ROPS is in the raised position
- No tractor oil leaks
- Radiator free of debris
- Engine oil level and condition
- Engine coolant level and condition
- Power brake fluid level
- Power steering fluid level
- Fuel condition and level
- Sufficient lubrication at all lube points
- Air filter condition OPS-U-0030

3500 02/12

**Operation Section 4-10** 

## 7.2 Blade Pre-Operation Inspection/Service

Before each blade use, a complete inspection and service is required to ensure the blade is in a good and safe working condition. Damaged and/or broken parts should be repaired and/or replaced immediately. To ensure the blade is ready for operation, conduct the following. *OPS- 0020\_A* 

The operator's manual and safety signs affixed on the unit contain important instructions on the safe and proper use of the equipment. Maintain these important safety features on the implement in good condition to ensure the information is available to the operator at all times.

- Ensure the manual canister is secured to the equipment with the operator's manual inside.
- Ensure all safety signs are in place and legible. Replace missing, damaged, and illegible decals. *OPS-U- 0011*

3500 02/12

**Operation Section 4-11**

## DO NOT OPERATE an UNSAFE TRACTOR or IMPLEMENT

3500 02/12

**Operation Section 4-13** 

## **8. DRIVING THE TRACTOR AND IMPLEMENT**

Safe tractor transport requires the operator possess a thorough knowledge of the model being operated and precautions to take while driving with an attached implement. Ensure the tractor has the capacity to handle the weight of the implement and the tractor operating controls are set for safe transport. To ensure safety while driving the tractor with an attached implement, review the following. *OPS-U- 0012* 

This Implement may be wider than the Tractor. Be careful when operating or transporting this equipment to prevent the Implement from running into or striking sign posts, guard rails, concrete abutments or other solid objects. Such an impact could cause the Implement and Tractor to pivot violently resulting in loss of steering control, serious injury, or even death. Never allow the Implement to contact obstacles. (S3PT-12)

AWARNING

**G** Transport only at speeds where you can maintain control of the equipment. Serious accidents and injuries can result from operating this equipment at high speeds. Understand the Tractor and Implement and

Before transporting the Tractor and Implement, determine the proper transport speeds for you and the equipment. Make sure you abide by the following rules:

Test the tractor at a slow speed and increase the speed slowly. Apply the Brakes smoothly to determine the stopping characteristics of the Tractor and Implement. As you increase the speed of the Tractor the stopping distance increases. Determine the maximum transport speed not to exceed 20 mph (30 kph) for transporting this equipment.

Test the equipment at a slow speed in turns. Increase the speed through the turn only after you determine that the equipment can be operated at a higher speed. Use extreme care and reduce your speed when turning sharply to prevent the tractor and implement from turning over. Determine the maximum turning speed for you and this equipment before operating on roads or uneven ground.

Only transport the Tractor and Implement at the speeds which allow you to properly control the equipment.

Be aware of the operating conditions. Do not operate the Tractor with weak or faulty brakes or worn tires. When operating down a hill or on wet or rain slick roads, the braking distance increases: use extreme care and reduce your speed. When operating in traffic always use the Tractor's flashing warning lights and reduce your speed. Be aware of traffic around you and watch out for the other guy. (SG-19)

3500 02/12

**Operation Section 4-14** 

#### 8.1 Starting the Tractor

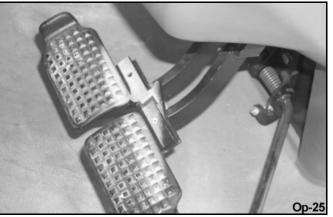

The procedure to start the tractor is model specific. Refer to the tractor operator's manual for starting procedures for your particular tractor. Consult an authorized dealer if the starting procedure is unclear. Ensure the 3-point control lever is in the lowered position and the PTO is disengaged before starting the tractor. *OPS-U-0033* 

#### 8.2 Brake and Differential Lock Setting

Make sure the tractor brakes are in good operating condition. Tractor brakes can be set to operate independently allowing single rear wheel braking action or locked together to provide simultaneous rear wheel braking. FOR MOST DRIVING AND OPERATING CONDITIONS, THE BRAKE PEDALS SHOULD BE LOCKED TOGETHER TO PROVIDE THE MOST EFFECTIVE BRAKING ACTION.

Always disengage the tractor differential lock when turning. When engaged the differential lock will prevent or limit the tractor from turning. During normal cutting conditions, locking the differential provides no benefit and should not be used. *OPS-U-0013* 

#### **AWARNING**

Be aware of the operating conditions. Do not operate the Tractor with weak or faulty brakes. When operating down a hill or on wet or rain slick roads, the braking distance increases; use extreme care and reduce your speed in these conditions. When operating in traffic, always use the Tractor's flashing warning lights and reduce your speed. Be aware of traffic around you and watch out for the other guy.

OPERATION

3500 02/12

**Operation Section 4-15** 

#### 8.3 Driving the Tractor and Blade

Start off driving at a slow speed and gradually increase your speed while maintaining complete control of the tractor and blade. Moving slowly at first will also prevent the tractor from rearing up and loss of steering control. The tractor should never be operated at speeds that cannot be safely handled or which will prevent the operator from stopping quickly during an emergency. If the power steering or engine ceases operating, stop the tractor immediately as the tractor will be difficult to control.

Perform turns with the tractor and blade at slow speeds to determine how the tractor with an attached implement handles a turn. Determine the safe speed to maintain proper control of the tractor when making turns. When turning with an implement, the overall working length of the unit is increased. Allow additional clearance for the blade when turning.

To avoid overturns, drive the tractor with care and at safe speeds, especially when operating over rough ground, crossing ditches or slopes, and turning corners. Tractor wheel tread spacing should be increased when working on inclines or rough ground to reduce the possibility of tipping.

Use extreme caution when operating on steep slopes. Keep the tractor in a low gear when going downhill. DO NOT coast or free-wheel downhill. *OPS-0037\_A* 

## 9. OPERATING THE TRACTOR AND IMPLEMENT

THE OPERATOR MUST COMPLETELY UNDERSTAND HOW TO OPERATE THE TRACTOR AND IMPLEMENT AND ALL CONTROLS BEFORE ATTEMPTING TO OPERATE. The operator must read and understand the Safety and Operation Sections of the implement and tractor operator's manuals. These manuals must be read and explained to any operator who cannot read. Never allow someone to operate the implement and tractor without complete operating instructions.

Before starting any operation, the operator must become familiar with the area to be worked in and any obstacles and hazards contained within to ensure safety to the operator, bystanders, and equipment. Special attention should be paid to foreign debris, rough terrain, steep slopes, and passersby and animals in the area. *OPS-U- 0015* 

3500 02/12

## 9.1 Operating the Blade

Only operate the blade from the tractor operator's seat with the seatbelt securely fastened. The tractor must be equipped with a ROPS in the raised position or a ROPS cab.

#### Ditching (V-Type Ditch)

Tilt the Moldboard to the desired angle (15 degrees or less) down on the right (left) by use of the Moldboard Tilt Cylinder.

Adjust the Moldboard Pivot and Mainframe Swing to place the right (left) corner of the Blade directly behind the right (left) rear tire with a 45 degree to 60 degree angle between the Blade and a line parallel to the rear Axle. The combined adjustments of the Moldboard Pivot and Mainframe Swing will give this angle. For example, to obtain a 45 degree Blade Angle, rotate the Moldboard 15 degrees and swing the Mainframe 30 degrees, or rotate the Moldboard 30 degrees and swing the Mainframe 15 degrees depending on tractor tire spacing.

For light ditching, cleaning out ditches, and snow removal, operate the tractor at slow speeds, and be careful not to hit any hidden objects. Operating with a light load on the Blade or at high speeds will subject the Blade to severe damage from the impact load if a solid object is hit.

**NOTE:** Never rotate Blade Tilt, Carrier Pivot, or Mainframe Pivot with hydraulics while Blade is under load. This will cause excessive load on pins and shafts which will result in damage to Blade. Remove load from Blade and then rotate.

To refill a ditch, offset the mainframe to the right (left) and rotate the Moldboard to push the dirt into the ditch while traveling forward.

#### <u>Utility</u>

To clean close to a fence or barn, offset the Moldboard to the right or left to extend the Blade beyond the tractor tire. Be careful not to hang the Blade Tip as this could result in damage to the Blade or Moldboard. For smoothing out loose soil, a fine finish can be obtained by pushing the soil with the back of the Moldboard.

#### <u>Grading</u>

Grading can be accomplished with the use of the Planer Wheel (Accessory Equipment). Set the Moldboard Pivot to the desired angle, lower the Blade to the ground, and then set the depth of cut with the Hydraulic Cylinder. Do not drop the Planer Wheel on the ground. This could result in damage to the Planer Wheel or Hydraulic Cylinder.

#### **Backfilling**

The Moldboard can be manually rotated 180 degrees for backfilling operations. This position requires a careful setting of the Top Link allowing a Blade angle which does not tend to bury itself, but move across the top of the ground. Backfilling is a very critical operation because the Blade tends to dig into the ground. The backfilling operation should be performed with the Mainframe straight behind the tractor with the Blade set in the center position (perpendicular to the Mainframe). The work should be kept in the center of the Blade. Avoid concentrated loads on the end of the Blade. Do not ram into a load at any time as this multiplies the forces several times normal and could result in damage to your Blade. Perform all backfilling operations at slow speeds to prevent damage if the Blade hits an object. Moving snow with the Blade in the backfill position is a very delicate operation and should be performed with care. It is very easy to hit hidden objects when moving the light snow. It is also very easy to operate the Blade at too high a speed, with resulting damage.

**NOTE:** The warranty shall not apply to damage caused by misuse, abuse, or contact with obstructions.

3500 02/12

**Operation Section 4-17** 

#### 9.2 Shutting Down the Implement

Park the tractor on a level surface, place the transmission in park or neutral and apply the parking brake, lower the attached implement to the ground, shut down the engine, remove the key, and wait for all motion to come to a complete stop before exiting the tractor. *OPS-BL- 0002* 

# **10. DISCONNECTING THE BLADE FROM THE TRACTOR**

Before disconnecting the blade, all movement must cease. Move the blade to a level storage location and lower the unit to the ground. If the blade is not resting securely on the ground, block the blade up securely before attempting to disconnect it from the tractor.

Use extreme care to keep feet and hands from under the blade and clear of any pinch points. OPS- 0051\_A

Always shut the Tractor completely down, place the transmission in park, and set the parking brake before you or anyone else attempts to connect or disconnect the Implement and Tractor hitches. (S3PT-15)

When disconnecting the blade the tractor should be completely shut down and secured in position, by lowering the parking jack. Relieve hydraulic pressure by moving the control levers back and forth several times. Then extend the tractor 3-point hitch top link to remove tension on the top link hitch pin. When the pin is loose and easy to rotate, remove the pin from the mower. Next remove both lower hitch pins. *OPS-0052\_A* 

3500 02/12

**Operation Section 4-18** 

## 11. BLADE STORAGE

Properly preparing and storing the blade at the end of the season is critical to maintaining its appearance and to help ensure years of dependable service. The following are suggested storage procedures:

- Thoroughly clean all debris off the blade to prevent damage from rotting grass and standing water.
- Lubricate all blade grease points and fill gearbox oil levels as detailed in the maintenance section.
- Tighten all bolts and pins to the recommended torque.
- Check the blade for worn and damaged parts. Perform repairs and make replacements immediately so that the blade will be ready for use at the start of the next season.
- Store the blade in a clean, dry place with the mower housing resting securely on blocks or at ground level.
- Use spray touch-up enamel where necessary to prevent rust and maintain the appearance of the blade. OPS-0053\_A

## A DANGER

Never allow children to play on or around Tractor or Implement. Children can slip or fall off the Equipment and be injured or killed. Inadvertent contact with controls can cause the Implement to shift or fall crushing themselves or others. (SG-25)

## **12. TRANSPORTING THE TRACTOR AND IMPLEMENT**

Inherent hazards of operating the tractor and implement and the possibility of accidents are not left behind when you finish working in an area. Therefore, the operator must employ good judgement and safe operation practices when transporting the tractor and implement between locations. By using good judgement and following safe transport procedures, the possibility of accidents while moving between locations can be substantially minimized. *OPS-U- 0017* 

Never allow children or other persons to ride on the Tractor or Implement. Falling off can result in serious injury or death. (SG-10)

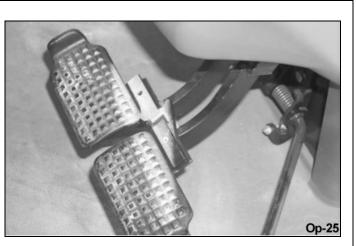

When transporting, only raise the blade enough to clear ground obstacles to prevent tipping, especially when traveling through rough terrain.

e Tracto

3500 02/12

Before transporting the tractor on a public roadway or boarding a trailer for transport, the tractor brake pedals should be locked together. Locking the pedals ensures that both wheels brake simultaneously while stopping, especially when making an emergency stop.

Use extreme caution and avoid hard applications of the tractor brakes when towing heavy loads at road speeds. Never tow the implement at speeds greater than 20 MPH (32 kph). *OPS-U- 0018* 

#### 12.1 Transporting on Public Roadways

Extreme caution should be used when transporting the tractor and implement on public roadways. The tractor must be equipped with all required safety warning features including a SMV emblem and flashing warning lights to alert drivers of the tractor's presence. Remember that roadways are primarily designed for automotive drivers and most drivers will not be looking out for you, therefore, you must look out for them. Check your side view mirrors frequently and remember that vehicles will approach quickly because of the tractor's slower speed. Be extremely cautious when the piece of equipment that you are towing is wider than the tractor tire width and/or extends beyond your lane of the road.

Make sure that a proper size safety tow chain is secured between the tractor and implement before entering a public road. *OPS-U- 0019* 

Only tow the Implement behind a properly sized and equipped Tractor which exceeds the weight of the Implement by at least 20%. DO NOT tow the Implement behind a truck or other type of vehicle. Never tow the Implement and another Implement connected in tandem. Never tow the Implement at speeds over 20 MPH. (STI-06)

A DANGER

A WARNING

Never allow children or other persons to ride on the Tractor or Implement. Falling off can result in serious injury or death. (SG-10)

**AWARNING** 

Make certain that the "Slow Moving Vehicle" (SMV) sign is installed in such a way as to be clearly visible and legible. When transporting the Equipment use the Tractor flashing warning lights and follow all local traffic regulations. (SG-6)

3500 02/12

The SMV (Slow-Moving Vehicle) emblem is universal symbol used to alert drivers of the presence of equipment traveling on roadways at a slow speed. SMV signs are a triangular bright orange with reflective red trim for both easy day and night visibility. Make sure the SMV sign is clean and visible from the rear of the unit before transporting the tractor and implement on a public roadway. Replace the SMV emblem if faded, damaged, or no longer reflective. OPS-U-0020

Make sure that all tractor flashing warning lights, headlights, and brake/tail lights are functioning properly before proceeding onto public roads. While newer model tractors have plenty of lighting to provide warning signals and operating lighting, most older models are only equipped with operating lights. Consult an authorized tractor dealer for lighting kits and modifications available to upgrade the lighting on older tractor models. *OPS-U- 0021* 

When operating on public roads, have consideration for other road users. Pull to the side of the road occasionally to allow all following traffic to pass. Do not exceed the legal speed limit set in your country for agricultural tractors. Always stay alert when transporting the tractor and implement on public roads. Use caution and reduce speed if other vehicles or pedestrians are in the area. *OPS-B-0022* 

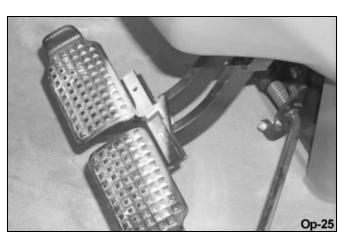

3500 02/12

**Operation Section 4-21** 

Reduce speed before turning or applying the brakes. Ensure that both brake pedals are locked together when operating on public roads. *OPS-U- 0023* 

## 12.2 Hauling the Tractor and Implement

Before transporting a loaded tractor and implement, measure the height and width dimensions and gross weight of the complete loaded unit. Ensure that the load will be in compliance with the legal limits set for the areas that will be traveled through. *OPS-U- 0024* 

Use adequately sized and rated trailers and equipment to transport the tractor and implement. Consult an authorized dealer to determine the proper equipment required. Using adequately sized chains, heavy duty straps, cables and/or binders, securely tie down both the front and rear of the tractor utilizing the proper tie down locations as specified by the tractor manufacturer. *OPS-U- 0025* 

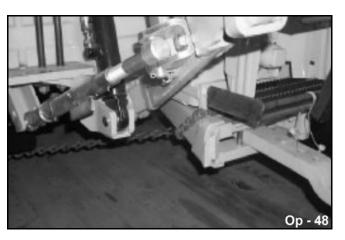

3500 02/12

**Operation Section 4-22** 

**OPERATION** 

Arrange the chains so that when tightened, the chains are pulling downward and against themselves. Carefully tighten the securing chains or other fasteners using boomers or binders to apply maximum tension. Use extreme care when attaching and removing the securing devices as the extreme tension involved when released has the potential to inflict serious injury.

While hauling the tractor and implement, make occasional stops to check that the tractor and implement have not moved or shifted and that the securing chains have maintained tension. If during transport a hard braking, sharp turning, or swerving action was performed, stop at the next safe location to inspect the security of the load. *OPS-U- 0026* 

3500 02/12

**Operation Section 4-23** 

# **13. TROUBLESHOOTING GUIDE**

Problem	Possible Cause	Remedy
Shearing M/B Carrier	Lack of lubrication	Lubricate Pivot Pin
Pivot Pin Bolt	Bolt not tightened properly	Tighten Bolt to proper torque
Bent Moldboard	Small curve is normal from weld pull Hitting hidden objects	Can be removed but will not affect operation Know soil conditions, keep speed to a minimum.
Blade will not penetrate soil	Cutting edge dull Blade set to straight Soil too hard	Replace Cutting edge Increase Top Link length Use scarifiers to loosen soil
A-Frame bent	Hitting hidden objects in the backfill position	Use slow speed when in unknown soil conditions
Moldboard digging in too much	Blade pitch excessive Soft ground.	Adjust Top Link Install Gauge Wheel. Install Skid Shoes.
Unable to hold level ground	Tractor and Blade following contour Tractor Draft Control lifting Blade	Install Gauge Wheel Set Tractor Draft Control
Hydraulic Cylinder(s) will not operate	Not enough pressure Valve not connected properly Quick Coupler not completely connected	Check pressure Re-plumb Valve Complete connection
3500 02/12	Operation Section 4-24	

Problem	Possible Cause	Remedy			
Hydraulic Pump not shutting off on Closed Center System	Using Open Center Valve	Replace Valve or Conversion Plug and Main Relief			
	Open Center Conversion Plug	Replace with Closed Center Plug			
Pumping over Relief Valve		Replace with No Relief Plug			
Oil leaking at hose	Connection not tight	Tighten connection			
connection	Did not use sealant	Apply a good sealant to connection			
	Connection cracked from over-tightening	Replace cracked connection			
	Mismatched Connection threads or types.	Use correct connectors			
	51				

OPERATION

# **MAINTENANCE SECTION**

Maintenance Section 5-1

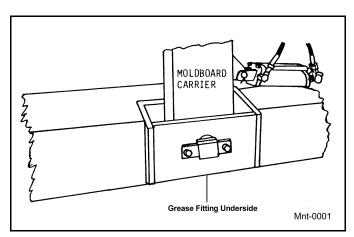

## Lubrication

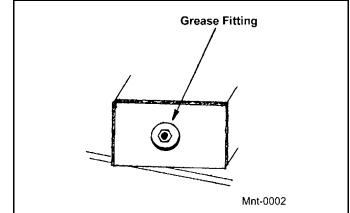

The Rhino 3500 is a rugged, dependable Blade that should perform satisfactorily with the following preventive maintenance:

Lubricate the Moldboard Pivot Pin (**Figure Asm-0001**), the Moldboard Tilt Pin (**Figure Asm-0002**), and Mainframe Swing Pin on the A-Frame after every 10 hours of operation. Decals are placed in locations about the implement indicating locations of Grease Fittings.

Replace excessively worn Grader Blade when ditching. A badly worn cutting edge increases the strain on the Blade and the Tractor and reduces efficiency.

If the Gauge Wheel is used, a Grease Fitting is provided at the Caster Pivot location and on Wheel Hub.

## **Proper Torque For Fasteners**

The chart lists the correct tightening torque for fasteners. When bolts are to be tightened or replaced, refer to this chart to determine the grade of bolts and the proper torque except when specific torque values are assigned in manual text.

Recommended Torque in Foot Pounds Unless Otherwise Stated in the Manual\*

**NOTE:** These values apply to fasteners as received from supplier, dry or when lubricated with normal engine oil. They do not apply if special graphited or molydisulphide greases or other extreme pressure lubricants are used. This applies to both UNF fine and UNC coarse threads.

3500 02/12

MAINTENANCE

3500 02/12

Maintenance Section 5-3

# RHINO

#### 1. LIMITED WARRANTIES

- 1.01. Rhino warrants for one year from the purchase date to the original non-commercial, governmental, or municipal purchaser ("Purchaser") and warrants for six months to the original commercial or industrial purchaser ("Purchaser") that the goods purchased are free from defects in material or workmanship.
- 1.02. Manufacturer will replace for the Purchaser any part or parts found, upon examination at one of its factories, to be defective under normal use and service due to defects in material or workmanship.
- 1.03. This limited warranty does not apply to any part of the goods which has been subjected to improper or abnormal use, negligence, alteration, modification, or accident, damaged due to lack of maintenance or use of wrong fuel, oil, or lubricants, or which has served its normal life. This limited warranty does not apply to any part of any internal combustion engine, or expendable items such as blades, shields, guards, or pneumatic tires except as specifically found in your Operator's Manual.
- 1.04. Except as provided herein, no employee, agent, Dealer, or other person is authorized to give any warranties of any nature on behalf of Manufacturer.

#### 2. REMEDIES AND PROCEDURES.

- 2.01. This limited warranty is not effective unless the Purchaser returns the Registration and Warranty Form to Manufacturer within 30 days of purchase.
- 2.02. Purchaser claims must be made in writing to the Authorized Dealer ("Dealer") from whom Purchaser purchased the goods or an approved Authorized Dealer ("Dealer") within 30 days after Purchaser learns of the facts on which the claim is based.
- 2.03. Purchaser is responsible for returning the goods in question to the Dealer.
- 2.04. If after examining the goods and/or parts in question, Manufacturer finds them to be defective under normal use and service due to defects in material or workmanship, Manufacturer will:

(a)Repair or replace the defective goods or part(s) or

(b)Reimburse Purchaser for the cost of the part(s) and reasonable labor charges (as determined by Manufacturer) if Purchaser paid for the repair and/or replacement prior to the final determination of applicability of the warranty by Manufacturer.

#### The choice of remedy shall belong to Manufacturer.

- 2.05. Purchaser is responsible for any labor charges exceeding a reasonable amount as determined by Manufacturer and for returning the goods to the Dealer, whether or not the claim is approved. Purchaser is responsible for the transportation cost for the goods or part(s) from the Dealer to the designated factory.
- 3. LIMITATION OF LIABILITY.
- 3.01. MANUFACTURER DISCLAIMS ANY EXPRESS (EXCEPT AS SET FORTH HEREIN) AND IMPLIED WARRANTIES WITH RESPECT TO THE GOODS INCLUDING, BUT NOT LIMITED TO, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
- 3.02. MANUFACTURER MAKES NO WARRANTY AS TO THE DESIGN, CAPABILITY, CAPACITY, OR SUITABILITY FOR USE OF THE GOODS.

3.03. EXCEPT AS PROVIDED HEREIN, MANUFACTURER SHALL HAVE NO LIABILITY OR RESPONSIBILITY TO PURCHASER OR ANY OTHER PERSON OR ENTITY WITH RESPECT TO ANY LIABILITY, LOSS, OR DAMAGE CAUSED OR ALLEGED TO BE CAUSED DIRECTLY OR INDIRECTLY BY THE GOODS INCLUDING, BUT NOT LIMITED TO, ANY INDIRECT, SPECIAL, CON-SEQUENTIAL, OR INCIDENTAL DAMAGES RESULTING FROM THE USE OR OPERATION OF THE GOODS OR ANY BREACH OF THIS WARRANTY. NOT WITHSTANDING THE ABOVE LIMITATIONS AND WARRANTIES, MANUFACTURER'S LIABILITY HEREUNDER FOR DAMAGES INCURRED BY PURCHASER OR OTHERS SHALL NOT EXCEED THE PRICE OF THE GOODS.

3.04. NO ACTION ARISING OUT OF ANY CLAIMED BREACH OF THIS WARRANTY OR TRANSACTIONS UNDER THIS WAR-RANTY MAY BE BROUGHT MORE THAN TWO (2) YEARS AFTER THE CAUSE OF ACTION HAS OCCURRED.

#### 4. MISCELLANEOUS.

- 4.01. Proper Venue for any lawsuits arising from or related to this limited warranty shall be only in Guadalupe County, Texas.
- 4.02. Manufacturer may waive compliance with any of the terms of this limited warranty, but no waiver of any terms shall be deemed to be a waiver of any other term.
- 4.03. If any provision of this limited warranty shall violate any applicable law and is held to be unenforceable, then the invalidity of such provision shall not invalidate any other provisions herein.
- 4.04. Applicable law may provide rights and benefits to purchaser in addition to those provided herein.

#### KEEP FOR YOUR RECORDS

ATTENTION: Purchaser should fill in the blanks below for his reference when buying repair parts and/or for proper machine identification when applying for warranty.

# TO THE OWNER/OPERATOR/DEALER

To keep your implement running efficiently and safely, read your manual thoroughly and follow these directions and the Safety Messages in this Manual. The Table of Contents clearly identifies each section where you can easily find the information you need.

The OCCUPATIONAL SAFETY AND HEALTH ACT (1928.51 Subpart C) makes these minimum safety requirements of tractor operators:

#### REQUIRED OF THE OWNER:

- 1. Provide a Roll-Over-Protective Structure that meets the requirements of this Standard; and
- 2. Provide Seat belts that meet the requirements of this paragraph of this Standard and SAE J4C; and
- 3. Ensure that each employee uses such Seat belt while the tractor is moving; and

4. Ensure that each employee tightens the Seat belt sufficiently to confine the employee to the protected area provided by the ROPS

#### REQUIRED OF THE OPERATOR:

- 1. Securely fasten seat belt if the tractor has a ROPS.
- 2. Where possible, avoid operating the tractor near ditches, embankments, and holes.
- 3. Reduce speed when turning, crossing slopes, and on rough, slick, or muddy surfaces.
- 4. Stay off slopes too steep for safe operation.
- 5. Watch where you are going especially at row ends, on roads, and around trees.
- 6. Do not permit others to ride.
- 7. Operate the tractor smoothly no jerky turns, starts, or stops.
- 8. Hitch only to the drawbar and hitch points recommended by the tractor manufacturer.
- 9. When the tractor is stopped, set brakes securely and use park lock, if available.

# Keep children away from danger all day, every day...

- Equip tractors with rollover protection (ROPS) and keep all machinery guards in place...
- Please work, drive, play and live each day with care and concern for your safety and that of your family and fellow citizens.
