

GKB DRAINMASTER

In continuous development since 1985, the GKB Drainmaster provides an effective solution to improve and accelerate the downward movement of moisture without the need for full surface renovation.

Ideal for natural grass sports surfaces and golf courses where standing water is an issue, the Drainmaster helps reduce surface wetness and increase available playing hours. Within just a few weeks, the grass regrows to reveal a more stable surface, improved turf quality and long-lasting drainage performance.

The Drainmaster attaches to your tractor and mills 4cm wide trenches perpendicular to the existing drainage system using parallel cutters. Removed material is discharged via a conveyor belt into a collector or container. The machine then backfills the trenches with sand, which is consolidated by the rear wheels to leave a clean, level finish.

Developed with expertise from GKB's contracting division, the Drainmaster combines robust build quality with user-friendly operation. The precisely designed hopper allows efficient coverage of a full pitch length in one pass, or across the width in two passes.

KEY FEATURES:

- **Linkage:** Drawbar eye
- **Sandbunker Capacity:** 4.0m³

Model No.	Description	Working Width	Weight	Tractor HP (Min.)	RRP ex GST	RRP inc GST
DM150	Drainmaster 4.0 m ³	150cm / 59"	3300kg	>120 hp + creeper gear	AU\$179,571	AU\$197,528
