

# GKB SANDFILLER

The GKB Sandfiller is designed to improve surface drainage and aeration on sports turf and golf courses, particularly greens. This versatile machine scarifies and simultaneously backfills with sand – or a sand and seed mix – in a single pass, creating ideal conditions for strong root development and healthy turf growth.

Capable of being operated by one person, the Sandfiller can also be used solely for scarifying and collecting material when the sand hopper is not in use. For overseeding, seed can be added to the hopper and delivered directly into the channels, optimising germination conditions while saving time, labour and cost.

Based on the proven principles of the GKB Combinator, the slitting rotor is fitted with carbide blades that generate airflow to lift material into a sideways tipping container, which can then be easily refilled with dried sand. Designed with efficiency in mind, the Sandfiller also delivers environmentally conscious operation with a reduced CO<sub>2</sub> footprint.

## KEY FEATURES:

- **Sandbunker Capacity:** 120L
- **Container Capacity:** 400L
- Threepoint Cat I linkage

Model No.	Description	Working Width	Weight	Tractor HP (Min.)	RRP ex GST	RRP inc GST
