

GKB SANDMOVER

Developed using the expertise of GKB's contracting division, the Sandmover is built to be the ideal partner for sports pitch installations and large-scale groundworks. It provides a precise and efficient way to apply profile layers or fill drainage trenches, even on demanding projects.

The Sandmover delivers accurate application of sand, split or gravel across wide areas. Available in 180, 200 or 250cm (70", 79" or 98") working widths and with hopper capacities up to 6m³, layer thickness can be mechanically adjusted between 2 and 10cm (0.7"–3.9"). An optional hydraulically adjustable conveyor belt enables precise filling of drainage trenches.

Designed for reliability and long-term performance, the Sandmover features robust build quality without complicated hydraulic or electrical systems, reducing maintenance requirements and helping to keep operating costs down
