

GKB TOPAIR

Frequent aeration is essential for improving drainage and allowing moisture, nutrients and oxygen to reach the rootzone. The GKB Topair enables you to aerate and roll in a single pass, enhancing the upper soil profile while leaving a level surface ready for recovery and play.

Designed to deliver multifunction performance without compromise, the Topair saves time and labour by combining two key operations into one, while also reducing fuel use and CO₂ emissions.

The machine features GKB's unique Evolverte® blades, achieving penetration depths of up to 16cm (6.2") without the prying effect that can disrupt the surface. Their design minimises friction, reducing power requirements. A hydraulically adjustable pressure roller allows settings to be tailored to ground conditions and can be water-ballasted for additional weight and penetration when required.

Developed as a sustainable solution for natural turf management, the Topair supports strong, healthy turf while reducing reliance on chemical treatments

KEY FEATURES:

- **Water Tank Capacities:**
 - TA120: 165L
 - TA160: 230L
 - TA200: 300L
 - TA240: 360L
- **Linkage:** Three-point linkage Cat I - II
