

# MAJOR CENTRE MOUNTED GRASS TOPPER

The MAJOR Centre Mounted Grass Topper is a fully gear-driven machine designed for efficient pasture topping and general farm maintenance. Built for reliability and consistent performance, it features high-speed rotors fitted with a twin-cut swinging mulching blade system for effective grass control and even material distribution. The MJ55-270 model is a heavier-duty version, equipped with extra heavy-duty gearboxes for demanding conditions.

With no belts or pulleys, the gear-driven transmission reduces maintenance and improves long-term durability. Rubber shock absorbers positioned between the rotor gearboxes help absorb impact loads, protecting the driveline during operation. A galvanised finish comes standard for corrosion resistance and extended service life.

## KEY FEATURES:

- Working Width: 2.7m (9')
- PTO Speed: 1000 RPM
- Fully gear-driven transmission
- Twin-cut swinging mulching blade system
- \*Four blades per rotor
- Heavy-duty gearboxes with rubber shock absorbers
- Low maintenance – no belts or pulleys
- Galvanised finish as standard

**Built for strength, simplicity and reliable pasture management.**
