

MAJOR

MJ2000 HEAVY DUTY FLAIL COLLECTOR

The MAJOR MJ2000 Heavy Duty Flail Collector is purpose-built for professional, large-scale green space maintenance. Featuring a 2.0m working width and a high-capacity 3.0m³ collection hopper, the MJ2000 delivers maximum productivity and efficiency in demanding environments.

Engineered with a robust construction, the MJ2000 is designed to perform in challenging conditions including scrubland and areas covered in lantana, blackberry and dense woody weeds, while still capable of producing a clean, fine finish in standard turf applications. This versatility makes it ideal for contractors, councils, estates and large property managers requiring a dependable cut-and-collect solution.

The floating linkage system allows the machine to closely follow ground contours, even across uneven or punishing terrain, ensuring consistent cutting performance and a quality finish. A simple hydraulic high-lift function enables the 3.0m³ hopper to tip at 2.1m, allowing for fast and efficient emptying into trailers or skips.

Fitted with BKT turf tyres to minimise ground compaction, the MJ2000 is suitable for use with large compact and agricultural tractors, making it a powerful and reliable choice for intensive vegetation management and turf maintenance operations.
